                                                                                                                                                                                                                                                                                                                                                                                                                                   -!- TISSUE SPECIFICITY: EXPRESSED IN MOST TISSUES, BUT MOST STRONGI IN THE ADRENAL GLAND. EXPRESSED MORE STRONGLY IN LIVER KUPFFER CELLS THAN IN HEPATOCYTES.
-!- SIMILARITY: BELONGS TO THE STEROL O-ACYLTRANSFERASE FAMILY.
                                                                                                                                                                               "Identification of a form of acyl-CoA:cholesterol acyltransferase specific to liver and intestine in nonhuman primates.";
J. Biol. Chem. 273:36747-26754(1998).
-!- FUNCTION: PLAYS A ROLE IN LIPOPROTEIN ASSEMBLY AND DIETARY CHOLESTEROL ABSORPTION. IN ADDITION TO ITS ACYLTRANSFERASE ACTIVITY, IT MAY ACT AS A LIGASE (BY SIMILARITY).
-!- CATALYITY ACYLTY: Acyl-CoA + cholesterol = CoA + cholesterol

"Complementation of mutation in acyl.-CoA:cholesterol acyltransferase (ACAT) fails to restore sterol regulation in ACAT-defective sterol-resistant hamster cells.";
-1. FUNCTION: CATALYZES THE FORMATION OF FATTY ACID-CHOLESTEROL ESTERS. PLAYS A ROLE IN LIPOPROTEIN ASSEMBLY AND DIETARY CHOLESTEROL ABSORPTION.
-1. CATALYTIC ACTIVITY: Acyl-CoA + cholesterol = COA + cholesterol

"Cloning of a rat novel gene encoding an acyl CoA:dlacylglycerol
acyltransferase, a key enzyme in triacylglycerol synthesis.";
Submitted (AUG-2000) to the EMBL/GenBank/DDBJ databases.
--- FUNCTION: Catalyzes the terminal and only committed step in
triacylglycerol synthesis by using diacylglycerol and fatty eco.
COA as substrates.

56crol oacyltransferase 1 (EC 2.3.1.26) (Cholesterol acyltransferase
1) (Acyl coenzyme A:cholesterol acyltransferase 1) (ACAT-1).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Green S., Steinberg D., Quehenberger O.;
"Cloning and expression in Xenopus oocytes of a mouse homologue of thuman acylcoenzyme A: cholesterol acyltransferase and its potential role in metabolism of oxidized LDL.";
Blochem. Biophys. Res. Commun. 218:924-929(1996).
-!- FUNCTION: CATALYZES THE FORMATION OF FATTY ACID-CHOLESTEROL ESTERS. PLAYS A ROLE IN LIPOPROTEIN ASSEMBLY AND DIETARY CHOLESTEROL ABSORPTION.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Transferase; Acyltransferase; Transmembrane; Endoplasmic reticulum; Cholesterol metabolism.

    -1- CATALYTIC ACTIVITY: Acyl-CoA + cholesterol = CoA + cholesterol

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Eukaryota; Metazoa; Chordata; Craniata; Vertebrata; Euteleostomi;

SUMMARIES

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

diacylglycerol 0-acyltransferase (EC 2.3.1.20) [validated] - Arabidopsis thaliana C;Species: Arabidopsis thaliana (mouse-ear cress) C;Date: 24-Oct-2000 #sequence_revision 24-Oct-2000 #text_change 17-Nov-2000 C;Accession: T52584 R;Hills, M.J.; Lu, C.; Hobbs, D.H. FBBS Lett. 452, 145-149, 1999 R;BS Lett. 452, 145-149, 1999 A;Reference number: Z26127 A;Reference number: Z26127 A;Reference number: Z26127 A;Accession: T52584

A;Status: preliminary; translated from GB/EMBL/DDBJ A;Molecule type: mRNA A;Residues: 1-520 <HIL> A;Cross-references: EMBL:AJ131831; PIDN:CAB44774.1 A;Experimental source: cultivar Columbia

C; Function:

A; Description: EC 2.3.1.20 [validated, MUID:99313150]; catalyzes the final acylation A; Pathway: triacylglycerol biosynthesis

C; Keywords: acyltransferase; coenzyme A

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         "Evaluation
                                                                                                                                                                                               hemoglobin h inclusions.

DISEASE: Defects in ATRX are the cause of Carpenter-Waziri syndrome (CWS), an X-linked recessive condition characterized by moderate mental retardation, short stature, brachydactyly with excessive skin creases, and widening of the knuckles.

DISEASE: Defects in ATRX are the cause of Juberg-Marsidi syndrome (JM) [MIM:309590]. JM is a rare X-linked recessive disease characterized by severe mental retardation, growth failure, sensorineural deafness, microgenitalism and early death.

SIMILARITY: BELONGS TO THE SNF2/RAD54 HELICASE FAMILY.

Biophys. Acta 1307:21-25(1996).

-I- FUNCTION: INTERACTS WITH CENTROWERIC HETEROCHROMATIN IN CHROMOSOMES AND BINDS TO A SPECIFIC SUBSET OF ALPHOID SATELLITE DNA, CALLED THE CENP-B BOX. MAY ORGANIZE ARRAYS OF CENTROMERE SATELLITE DNA INTO A HIGHER ORDER STRUCTURE WHICH THEN DIRECTS CENTROMERE FORMATION AND KINETOCHORE ASSEMBLY IN MAMMALIAN CHROMOSOMES (BY SIMILARITY).

-I- SUBUNIT: Homodimer (By similarity).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 CENB_CR:
